

# How to create a book

1. Log in to the LittleScribe app and tap 'Create'. Choose the orientation of your book and tap 'Next'.

2. Tap 'Add a new page' to add images to your book. If the images are already on your phone, choose 'Add from gallery'. If you are yet to take them, tap 'Take a new photo' and take your pictures using your device. When adding from the gallery, you can add up to 12 images at a time.

3. Your images will appear in your draft book and the prompts will tell you that you can **move pages by pressing and dragging the page**. And that you can **edit a page by tapping on that page**.

4. When you have your pages uploaded and in the correct order, you can **preview your book**, to see what it will look like. **You are now ready to edit each page of your book.**

## Teaching Tips:

- ✓ Place your work onto a dark background, such as a dark coloured piece of card, as this will make the cropping process easier when you edit each page.
- ✓ Ensure there is good lighting when you take your photographs, and hold your device as steady as possible.
