

# How to edit a book

1. When all of the pages are in your draft book and you have moved the pages to the correct position, you are ready to edit each page, ready for publishing. **Tap any page to open and edit the page.**

2. **Touch the corner of the orange grid** to crop the page and make sure that within the orange box is the content that you want to be included on that page.

3. When the edit is complete, tap the blue tick. You can enhance your image by applying the 'magic' filter, or you might prefer the original version. When you are happy with your page, tap the blue tick again and your edit is complete. **You can then go through each page to edit ready for publishing.**

4. When you have your pages uploaded and in the correct order, you can **preview your book**, to see what it will look like. **You are now ready to edit each page of your book.**

## Teaching Tips:

- ✓ If you take your photo on a dark background, the orange grid will find the edges of your page. Use the cropping tool to ensure that you have no dark lines showing within the orange box.
- ✓ Editing each page will ensure that your final published work looks amazing!
